Professional Summary

Software Engineer II with 4+ years of experience designing and building backend, distributed, and event-driven systems for fintech and banking products. Experienced in Java, Spring Boot, Kafka, asynchronous processing, financial workflows, system design, production reliability, and regulatory-compliance platforms, with end-to-end ownership from architecture and implementation through production rollout and operational support.

Technical Skills

Languages & Backend: Java, SQL, Spring Boot, Microservices, REST APIs, Hibernate/JPA, Spring Batch
Distributed Systems: Kafka, Apache Flink, Event-Driven Architecture, Asynchronous Processing, Fault Tolerance, Reconciliation, Batch Processing
Data: PostgreSQL, Redis, MongoDB, Elasticsearch, Amazon Redshift
Cloud & DevOps: AWS, Amazon S3, AWS Lambda, Docker, Kubernetes, Jenkins, CI/CD, Git/GitHub
Security & Integration: JWT, Google SSO, SFTP, DRM Encryption, API Authentication, Secure File Processing

Professional Experience

Zeta *Bengaluru, India*
Software Engineer II *Apr 2025 – Present*

- Engineered and delivered the **Credit Balance Refund** platform, replacing manual excess-balance refund operations with Kafka-driven async processing, notifications, and reconciliation. Eliminated **100% of manual refunds**, processing **600 refunds/day** with automatic recovery of **400+ transactions/hour**.
- Architected an asynchronous **Annual Statement platform** generating customer financial statements across Mobile App, Email, and Support Center. Built Redshift/S3 data extraction, event-driven PDF generation with password protection, and lifecycle tracking, supporting **1,000 statements/day**.
- Built a reusable **job-processing platform** standardizing secure file-transfer or file-encryption workflows across banking use cases, with SFTP integration, Kafka-based state tracking, and self-healing recovery. Adopted across **8 internal use cases within 3 months** by multiple teams.
- Implemented an **RBI-mandated account-closure platform** automating handling of dormant/inactive accounts via Redshift reporting, Flink processing, and rule-driven workflows with audit logging. Handled **450 accounts/day**, closing **150K+ accounts** total.
- Developed and launched an extensible **email-verification platform** supporting secure onboarding via Magic Links and Google SSO. Serves **200K+ users** with **1,000 verifications/day** and **zero post-launch production incidents**.

Bizongo *Bengaluru, India*
Software Engineer II *Apr 2024 – Mar 2025*

- Designed an end-to-end **invoice-backed lending platform** for vendor working-capital requests, spanning **6+ distinct system components** across invoice validation, credit-decision integration with **2 financial institutions**, loan-offer generation, and disbursement/repayment workflows.
- Built a reusable **XML-to-JSON integration platform** using AWS Lambda to solve protocol mismatches between XML-based external systems and JSON-based internal APIs. The solution standardized third-party integrations and was adopted across **4+ services**.
- Collaborated with the **ONDC** ecosystem team to define and implement unsecured working-capital lending protocols within Bizongo's lending platform, enabling vendor loan requests to be distributed to **5+ financial institutions** participating in ONDC working-capital lending.

Software Engineer I *Jun 2022 – Mar 2024*

- Built Spring Batch-based **fraud-detection and risk-scoring pipelines** to streamline pre-disbursement vendor and shipment assessment. Reviewed approximately **200 shipments/day**, applying weighted scoring and risk-based red/green classification, and reduced manual risk-review effort by approximately **40%**.
- Led migration of core invoicing services from Ruby to **Java 17**, addressing maintainability and performance limitations in the legacy implementation. Redesigned critical service flows and reduced API latency by approximately **60%** while improving debugging, maintainability, and development efficiency.
- Owned end-to-end development of the **invoicing platform**, including international invoices, bulk-processing workflows, asynchronous PDF generation, and auto-generated notifications. The platform supported **1,200+ invoices/month** with a **90%+ success rate** and approximately **20-second processing time**.

Education

JIS College of Engineering *Aug 2018 – May 2022*
B.Tech in Computer Science Engineering *GPA: 8.88/10.0*

Achievements

- Received **Outstanding Performer of the Year** and consecutive **Shining Star Awards at Zeta**; received **Star of the Quarter** and **Star of the Month at Bizongo** for engineering delivery, ownership, and impact.
- **Competitive Programming:** AIR **17/24,000** in Scaler Edge Apex; Global Rank **1143** in Google Kick Start 2021; winner of the Bizongo Engineering Hackathon.
