## Professional Summary

Software Engineer II with 4+ years of experience designing and building backend, distributed, and event-driven systems for fintech and banking products. Experienced in Java, Spring Boot, Kafka, asynchronous processing, financial workflows, system design, and production reliability, with hands-on delivery of an RBI-mandated compliance platform and end-to-end ownership from architecture and implementation through production rollout and operational support.

## Technical Skills

**Languages & Backend:** Java, Spring Boot, Microservices, REST APIs, Hibernate/JPA, Spring Batch, SQL
**Distributed Systems:** Kafka, Apache Flink, Event-Driven Architecture, Asynchronous Processing, Fault Tolerance, Reconciliation, Batch Processing
**Data:** PostgreSQL, Redis, MongoDB, Elasticsearch, Amazon Redshift
**Cloud & DevOps:** AWS, Amazon S3, AWS Lambda, Docker, Kubernetes, Jenkins, CI/CD, Git/GitHub
**Security & Integration:** JWT, Google SSO, SFTP, DRM Encryption, API Authentication, Secure File Processing

## Professional Experience

**Zeta** *Bengaluru, India*
**Software Engineer II** *Apr 2025 – Present*

- Automated excess-balance refunds end-to-end with the **Credit Balance Refund** platform, removing manual work entirely and handling ∼**600 refunds/day** at current volume, with Kafka-driven recovery tuned to **400+ transactions/hour** for expected load and failure rates, backed by scheduled reconciliation for anything still pending.
- Architected an async **Annual Statement platform** that pulls data from Redshift/S3 and generates lifecycle-tracked, password-protected PDF statements, serving ∼**1,000 statements/day** across Mobile App, Email, and Support Center with automated regeneration on request and delivery confirmation.
- Created a reusable **job-processing platform** for secure file transfer and encryption across banking workflows, using SFTP integration, Kafka-based state tracking, and self-healing recovery; adopted by **8 teams within 3 months**.
- Closed **150K+ dormant/inactive accounts** for RBI compliance at ∼**450/day** using automated Redshift reporting and Flink-based rule-driven workflows with full audit logging.
- Launched an extensible email-verification platform supporting secure onboarding via Magic Links and Google SSO, with token expiry, retry handling, and rate-limiting built in to prevent abuse, now serving **200K+ users** at ∼**1,000 verifications/day** with **zero post-launch production incidents**.

**Bizongo** *Bengaluru, India*
**Software Engineer II** *Apr 2024 – Mar 2025*

- Designed an end-to-end **invoice-backed lending platform** for vendor working-capital requests, spanning **6+ system components** across invoice validation, credit-decision integration with **2 financial institutions**, loan-offer generation, and disbursement/repayment workflows.
- Worked around a blocking Java library issue by building a lightweight **XML-to-JSON** integration layer on AWS Lambda to bridge XML-based external systems with JSON-based internal APIs, keeping a critical third-party integration on track for launch day; later reused across **4+ services**.
- Partnered with the **ONDC** ecosystem team to define and implement unsecured working-capital lending protocols within Bizongo's lending platform, extending vendor loan requests to **5+ participating financial institutions**.

**Software Engineer I** *Jun 2022 – Mar 2024*

- Built Spring Batch pipelines for fraud detection and risk scoring, reviewing ∼**200 shipments/day** with weighted scoring and risk-based red/green classification, cutting manual review effort by ∼**40%**.
- Led the migration of core invoicing services from Ruby to **Java 17** to address maintainability and performance limits in the legacy system, redesigning key service flows and cutting API latency by ∼**60%**.
- Owned the invoicing platform end-to-end, covering international invoices, bulk processing, async PDF generation, and notifications; supported **1,200+ invoices/month** at a **90%+** success rate in ∼**20 seconds**.

## Education

**JIS College of Engineering** *Aug 2018 – May 2022*
B.Tech in Computer Science Engineering *GPA: 8.88/10.0*

## Achievements

- Received **Outstanding Performer of the Year** and consecutive **Shining Star Awards** at Zeta for engineering delivery, ownership, and impact.
- Received **Star of the Quarter** and **Star of the Month** at Bizongo for engineering delivery, ownership, and impact.
- **Competitive Programming:** AIR **17/24,000** in Scaler Edge Apex; Global Rank **1143** in Google Kick Start 2021; winner of the Bizongo Engineering Hackathon.
