Professional Summary

Software Engineer with 4+ years of experience building large-scale fintech and banking platforms. Led architecture and delivery of distributed financial systems at **Zeta**, including transaction orchestration, reconciliation platforms, regulatory compliance workflows, authentication systems, and secure data-transfer infrastructure. Strong background in **Java**, **Spring Boot**, **Kafka**, distributed systems, reliability engineering, and cloud-native platforms.

Experience

Zeta *Bengaluru, India*
Software Engineer 2 *Apr 2025 – Present*

- Architected and delivered **Credit Balance Refund (CBR)** automation for HDFC Pixel cards, eliminating **100% manual refund operations** through a fault-tolerant Credit Balance → Bank Account workflow with asynchronous reconciliation capable of recovering **400+ transactions per hour** and preventing stuck financial transactions.
- Built a reusable **job-processing platform** integrating Seclore DRM encryption, SFTP orchestration, retry handling, and secure file-transfer workflows; adopted across **4 internal use-cases within 3 months** and enabled HDFC InfoSec compliance.
- Delivered **RBI compliance** controls for UPI transaction restrictions impacting **50,000+ accounts**, event-driven systems, rule engines, and batch-processing infrastructure.
- Designed and launched extensible email-verification architecture supporting **Magic Link** and **Google SSO** authentication flows, enabling secure onboarding for **30,000+ users** with zero post-launch issues.
- Resolved a production reliability issue responsible for **50+ downstream incidents** by leading root-cause analysis of Elasticsearch CPU saturation and driving cross-team remediation.
- Improved platform security and reliability through inter-service authentication hardening, audit-data integrity protection, secrets remediation, and production incident prevention.

Bizongo *Bengaluru, India*
Software Engineer 2 *Apr 2024 – Mar 2025*

- Designed invoice-based lending workflows supporting disbursement and repayment across multiple credit lines, integrating AWS API Gateway for environment-agnostic callback handling.
- Collaborated with ONDC and Beckn ecosystem teams to define unsecured working-capital credit protocols and contributed to ecosystem-level integrations.
- Built secure lender-borrower onboarding platform integrating KYC verification providers, document management, API-key security, XML-to-JSON transformation pipelines, and automated PDF generation.

Software Engineer 1 *Jun 2022 – Mar 2024*

- Designed and developed fraud-detection and risk-scoring pipelines using Spring Batch, automating borrower risk assessment and suspicious activity detection across lending workflows before disbursement.
- Led migration of finance services from Ruby to Java 17, improving maintainability, scalability, and reliability.
- Owned and delivered invoice-processing platform capabilities including international invoice support, bulk workflows, asynchronous processing, and automated notifications, driving the project from design to deployment.

Education

JIS College of Engineering *Aug 2018 – May 2022*
B.Tech in Computer Science Engineering *GPA: 8.88/10.0*

Skills

Languages: Java, C++, SQL, JavaScript, Python
Backend: Spring Boot, Microservices, REST APIs, Kafka, Hibernate/JPA
Distributed Systems: Event-Driven Architecture, Async Processing, Distributed Transactions
Databases: PostgreSQL, Redis, MongoDB
Cloud/DevOps: AWS, Docker, Kubernetes, Jenkins
Security: OAuth2, JWT, Google SSO, DRM Encryption

Achievements

- **Shining Star Award (Zeta)** recipient for consecutive quarters, recognized for high-impact platform, reliability, and compliance initiatives.
- **Star of the Quarter & Star of the Month (Bizongo)** for exceptional project delivery and engineering excellence.
- **Hackathon Winner** among engineering teams at Bizongo.
- **Competitive Programming:** AIR 17/24,000 (Scaler Edge Apex), Global Rank 1143 (Google Kick Start 2021), Top 5% in NPTEL examinations.
